RESTAURANTS AND FOOD SERVICE

Establishing a restaurant or food service business requires a building permit for any new construction, remodel, tenant improvement, or change of use. Approval by the Tacoma-Pierce County Health Department is also required prior to the City issuing your building permit. Building permit applications cannot be approved over-the-counter and often take several weeks to review. We recommend hiring a designer/architect who can prepare your permit plans.

You can use the Restaurant Location Selection Worksheet and this tip sheet to help guide your permitting path for opening a restaurant or food service business.

Land Use and Zoning
Do not sign a lease before knowing if your preferred location is suitable for your type of operation.

The Planning and Development Services Department (PDS) offers free land use guidance. Contact us for more information or come to the Permit Counter during walk-in hours.

Some locations in the City have land use and zoning restrictions that do not allow restaurants or a particular type of restaurant. Most establishments are categorized as “Restaurant” or “Drinking Establishment,” while some may involve food or drink production. If your location is near the waterfront or in a historic district or building, you may need a land use approval before the City can issue a building permit.

Building Code Group Occupancy
The building code considers how many people can safely be in the building based on seating layout, size of the space, and use of each space (seating area, kitchen, storage, etc.).

You or your designer/architect will need to provide an occupancy calculation based on your floor plan.

Before you sign a lease, check the existing certificate of occupancy for the building to see how many people are allowed and for what type of business. Is the occupancy appropriate for your restaurant?

If not, you’ll be proposing a change of occupancy. This triggers review of the building for potential upgrades that could include energy code, accessibility, restrooms, exiting, firewalls, etc., and off-site improvements (sidewalk, curb, gutter, curb ramps, driveway/alley approach, street conditions).

We recommend your occupancy calculation be confirmed by a building engineer prior to submitting your permit application. See the Tenant Improvements tip sheet for more information.

Substantial Renovation or Construction
Additional development standards may be triggered if your project is considered a Substantial Renovation or Construction, defined as: Remodeling, alteration, or reconstruction of, and/or addition to, an existing building within a two-year period, the cost of which exceeds 50 percent of the value of the building as calculated using the latest Building Valuation Data published by the International Code Council. The two-year period is measured from the issuance date of the initial building permit for the project.

Accessibility
Providing an accessible route of travel from the accessible parking stall(s) into the building requires paved pathways of 2% slope or less,
RESTAURANTS AND FOOD SERVICE

doorways 32 inches to 48 inches wide, and clear 36 inch-wide pathways inside the building. If customers are to order from a counter, a minimum 36-inch portion of the counter that is no higher than 36 inches is also required. Restrooms may also need to be accessible. Historic buildings may have different requirements. Please schedule a Commercial Building Code Coaching meeting.

Fire Suppression and Safety
The occupancy also determines how many exits you will need from the space, and whether a fire sprinkler system or fire alarm system are required. If your restaurant requires a new fire sprinkler system it could be a substantial additional cost. Important thresholds:

- Occupancy of 50+ requires two exits from the space
- Occupancy of 100+ requires a fire sprinkler system
- Occupancy of 300+ requires a fire alarm system

Grease Treatment
As part of the restaurant plan review, the City will require a grease removal device. When researching locations, check to see what devices are already in place, and if none, where installation is feasible. The type and size of grease protection device depends on your menu and number of patrons. Dumpster pads where kitchen cookware or appliances are cleaned, kept, or left to dry will also need a sanitary drain with grease protection. See our Grease Interceptor Sizing and Installation tip sheet as well as the City's Grease Interceptor Policy for more information about Grease Interceptors.

Parking
If you change the use of a location or increase the floor area, you might need to meet additional parking. Parking exemptions and reductions may be available and can be explained by a Land Use Planner. Also, see our Parking Lot Changes tip sheet for more information.

Serving Alcohol
If you are planning to produce, serve, or sell alcohol, make sure you know which use classification in the zoning code fits your business and that you have the appropriate permits and licenses. For example, a “drinking establishment” (taverns, bars, pubs, or cocktail lounges, etc.) generally has an age restriction and is only allowed in certain zoning districts with a conditional use permit. This is different from a “restaurant” that primarily serves food but may offer alcohol (cafés, eateries, bistros, diners, restaurants, sandwich shops, etc.). Producing alcohol also
RESTAURANTS AND FOOD SERVICE

means your use would be associated with "craft production" as a brewery, winery, brewpub, or distillery.

Serving alcohol requires a liquor license – 60-90 days for approval, and both the location and applicant must meet the criteria for obtaining a liquor license. A liquor license is required from the Washington State Liquor and Cannabis Board for any alcohol production, sale, or service. More information is available at https://lcb.wa.gov/licensing/apply-liquor-license.

Sidewalk Cafes & Outdoor Seating

A street occupancy permit or sidewalk permit will allow you to have outdoor seating in the right-of-way. However, sidewalk cafes must meet specific requirements. See our Right-of-Way Occupancy and Sidewalk Café Tip Sheets for additional information.

Noise and Smoke

In general, commercial music should not be plainly audible from a distance of 100 feet or more from the property line of the business. Enforcement of the noise ordinance is complaint-based. See the noise enforcement code for more information. Additionally, consider placement of output ventilation that could create smoke (i.e., hood vents) so that they do not direct onto neighboring properties. Approval from the Puget Sound Clean Air Agency is required for wood-fired ovens and coffee roasters.

Signs and Awnings

Weather protection over pedestrian areas will likely be required for new construction, substantial renovation, or modifications to existing awnings. Plans can be reviewed as part of your overall building permit, or as part of your sign permit. See the Sign Permit Tip Sheet for more information about Sign permitting requirements.

Adequate Utility Services

Are the electric, water, dumpster, sewer, and gas capacities sufficient at your location – especially if you are adding new equipment or sprinklers?

Check with utility providers for guidance:
- Tacoma Public Utilities
  - Power and Water www.mytpu.org
- Puget Sound Energy
  - Natural Gas www.pse.com
- Environmental Services
  - Sanitary Sewer (253) 591-5588

Off-Site (Frontage) Improvements

Off-site improvements, or “frontage” improvements, include sidewalk, curb, gutter, ADA accessible ramps, driveways, and alley approaches next to the property.

All projects require existing off-site improvements that are in disrepair or damaged to be repaired to current City Public Works standards. For example, replacement of a portion of sidewalk that is cracked and not safe for pedestrians may be required.

For existing improvements, a site inspector may use the following guidelines in the field to determine what pedestrian access features would need to be removed, replaced, or repaired:
- A height differential or separation greater than 1/8 inch on the sidewalk
- Cracks, hairline fractures, separation or hole in the sidewalk greater than 1 inch in width
- Intersecting cracks that divide a sidewalk panel resulting in missing or depressed sidewalk
- Driveway or alley approach or access ramp with cross-slope greater than 2%.

Remember projects that meet the criteria of substantial renovations and construction require additional off-site improvements. Tacoma Municipal Code (TMC) Title 2.1
